## UNITED STATES DEPARTMENT OF AGRICULTURE Bureau of Entomology Washington, D. C.

## List of Questions

- 1. Where will the field headquarters of the corn-borer control campaign be located? At what street address? What officials will be located there?
- 2. What will be the main activities at field headquarters in Toledo? What facilities will be available?
- 3. What will be the field organization of the federal control forces? What will be the organization within the county?
- 4. What kinds of special machinery and supply equipment will be used by the regulatory forces in the enforced clean-up?

## Questions and Answers

1. Where will the field headquarters of the corn-borer control campaign be located? At what street address? What officials will be located there?

Ans. Field headquarters for the corn-borer control campaign are located at 615 Front Street, Toledo, Ohio. L. H. Worthley, in general charge of control work and C. O. Reed in charge of engineering and equipment, are located here. The control area for administrative purposes is divided into two divisions: The eastern division, Pennsylvania and New York, under H. N. Bartley with headquarters at 716 Commerce Building, Erie, Pa., and western division, including Michigan, Ohio, and Indiana, under E. G. Brewer at 2036 East 22d Street, Cleveland, Ohio.

2. What will be the main activities at field headquarters in Toledo? What facilities will be available?

Ans. Offices for the men in general charge of control work will be at the Toledo headquarters, also persons responsible for property and supplies, including a clerical staff sufficient for the work carried on there. Storage space for machinery and supplies, also repair and replacement facilities for motor equipment, will be supplied at the Toledo headquarters.

3. What will be the field organization of the federal control forces? What will be the organization within the county?

Ans. The control forces in the field are headed by Mr. Worthley, general supervisor, under whom are two district supervisors, H. N. Bartley for the eastern division with headquarters in Erie, and E. G. Brewer for the western division located in Cleveland. Each county will have a local man as county supervisor assisted by about 6 inspectors and a number of clean-up crews with their crew foreman. All engineering and equipment maintenance work is in charge of C. O. Reed of Ohio State University with R. D. Gray of the U. S. Department of Arriculture associated with him. Supplies and machinery will be distributed from 5 supply stations located at Silver Creek, N. Y., Saegerstown, Pa., Elyria, Ohio, Auburn, Ind., and Howell, Mich.

4. What kinds of special machinery and supply equipment will be used by the regulatory forces in the enforced clean-up?

Ans. Two important special pieces of machinery will be used, stubble pulverizers and burning apparatus. The stubble pulverizer will be used to destroy stubble standing in the field and in last year's cornfields already seeded to other crops. The burning apparatus consists of a heavy-duty truck with fuel-pressure tank and pump and burning carriage with nozzles generating heat of 1400°F. Other pieces of machinery will include light and heavy trucks, tractors, and plows.
